

# Actions Taken for Category

## Build

The information we got from the other groups indicated that we sufficiently explained how to build our code.

Minor action taken: Added a section to the readme giving a high level overview of what our build script does.

## Legibility

The groups seemed to agree that we did a fair job in porting the fortran code. No actions taken.

## Implementation

General consensus seemed to be that our python code was implemented well, but the C code needs work. No action taken.

## Maintainability

All groups agreed that our code would be difficult to maintain. A few mentioned that what we did is more maintainable than what existed. In our Project Archive there we will put the docs we received (one group asked us to include the test output).

## Requirements

Groups tended to say that our code met the requirements.
